SM5 UNIDIRECTIONAL DYNAMIC BOOM MICROPHONE

Specifically designed to minimize boom microphone problems in television and motion-picture sound stage and location recording. Smooth, natural response for dialogue, vocal music, and many scoring applications. Unusually effective cardioid pattern is uniform with frequency (even at the extreme low end) and completely symmetrical about the axis. This characteristic assures excellent rejection of unwanted sound (even air conditioner or traffic rumble), allows virtually no coloration of off-axis reflections or reverberation, and maintains presence over very wide working distance range. Highly effective integral windscreen completely surrounds the mechanical isolation elements for protection and maximum wind noise suppression. No transformers or inductors to pick up electrical noise or hum. Lightweight and perfectly balanced for fast pans and fishpole use. For 5/8" or smaller boom studs; 1/4"-20 stand thread adapter included.

May also be used to good advantage on optional desk stand (S33C) for outdoor sports and other problem applications.

SM56-57 UNIDIRECTIONAL DYNAMICS

Models SM56 and SM57 feature unusually effective cardioid pickup patterns that are uniform at all frequencies and in all planes! The effects of studio acoustics and background noise are minimized and the bright, clear sound is ideal for announcing, dialogue and vocal music. Unusually effective for rhythm pickups because they do not overemphasize low frequencies - resulting in clean, beautifully defined sound from percussion instruments, piano and string basses. In addition, "boominess" associated with close-up pickup is well controlled.

The cartridges are shock-mounted for quiet operation.

MODEL SM33 SUPER CARDIOID
RIBBON MICROPHONE
U.S. PATENT D-176,018

The SM33's ribbon element imparts a pleasantly warm characteristic to the male speaking voice which especially recommends it for announcing and narration applications. The same warmth is also imparted to instrumental or vocal recordings.
